

UI/UX Research Report: Checkout Flow Analysis

Internal Research - Q1 2026

Executive Summary

User research conducted in Q1 2026 across 500 sessions identified critical UX issues in the checkout flow. The primary finding is that 34% of users abandon the checkout at the order confirmation step. Eye-tracking data shows users struggle to locate the order button, particularly on mobile devices where it renders at only 80px wide.

Recommendation: increase order button minimum width to 200px and improve contrast ratio to meet WCAG 2.1 AA standards.

Key Findings

1. Order Button Visibility

- Current width: 80px (fails WCAG 2.1 minimum touch target of 44x44px on mobile)
- Contrast ratio: 2.8:1 (fails AA minimum of 4.5:1)
- 34% drop-off rate at this step

2. Form Completion Rate

- Step 1 (Products): 91% completion
- Step 2 (Address): 78% completion
- Step 3 (Payment): 71% completion
- Step 4 (Confirm): 66% completion

3. Error Recovery

- 42% of users who see a validation error do not retry
- Inline field errors are not noticed by 28% of users
- Recommendation: add a summary error banner at the top of the form

Recommended Button Specifications

Based on the research findings the following specifications are recommended:

- Minimum width: 200px
- Minimum height: 48px
- Font size: 16px bold
- Background color: #2563EB (blue-600)
- Text color: #FFFFFF
- Contrast ratio: 5.9:1 (passes AA)
- Border radius: 8px
- Loading state: spinner + 'Placing order...' text, button disabled
- Success state: green checkmark for 1.5s then redirect

Mobile Considerations

Mobile traffic accounts for 61% of all checkout sessions. The button must:

Internal Research - Q1 2026

- Span full width on screens narrower than 480px
- Maintain minimum 200px on tablets and desktop
- Have a minimum tap target of 48x48px per Google Material guidelines
- Show a clear pressed state (darken by 10%)

Accessibility Requirements

The following WCAG 2.1 criteria apply:

- 1.4.3 Contrast (AA): minimum 4.5:1 for normal text, 3:1 for large text
- 1.4.11 Non-text Contrast: UI components must meet 3:1 against background
- 2.5.5 Target Size: minimum 44x44px for interactive elements
- 4.1.2 Name/Role/Value: button must have aria-label when showing loading spinner
